The events of your life, from local walks to exotic trips, can provide endless inspiration for textile art. This inspiring book shows you how to record your experiences, using sketchbooks, journals and photography, to create personal narratives that can form a starting point for more finished stitched-textile pieces. Acclaimed textile artist and teacher Cas Holmes, whose work is often inspired by her life and the journeys she makes, helps you find inspiration through your own life and explains how to record what you see in sketchbooks and journals, which can often become beautiful objects in themselves. She explains how you can use photography, both as documentation and as inspiration, and sometimes incorporate it into the work itself, along with found objects and ephemera. Throughout the book are useful techniques that can be harnessed to add extra interest to your work, such as methods for making layered collages, how to 'sketch' with stitch, and advice on design and colour. If you want to create beautiful, unique work inspired by your life and travels, this is the perfect book for you.

The Sony A7 and A7R were the world's first mirrorless, interchangeable lens cameras with a full-frame sensor. Since their release, Sony has expanded the series, adding the A7S and A7II models. All of the cameras in the series are intended for amateurs to semi-professionals who want to jump into photography with a camera that combines compact size with the performance of a high end DSLR. While the camera manual explains what the camera can do, it doesn't show exactly how to use the camera to create great images! That's where Sony A7 Series: From Snapshots to Great Shots comes in. Starting with the top ten things users need to know about the camera, author Brian Smith carefully guides readers through the operating features. Readers get practical advice from a pro on which settings to use when, great shooting tips, and end of chapter assignments. In this book, updated from the Sony A7 / A7R: From Snapshots to Great Shots (2014), Brian will:

- Include an entire new chapter on Menu Settings and Camera Setup for the various cameras in the A7 series.
- Update and expand the video chapter to include new features in the Sony A7S and A7II, like XAVC S recording and Picture Profiles.
- Update the content covering new features like 5-Axis SteadyShot--only found in A7II--so that the text can apply to possible future cameras with this feature
- Extensively update the Lens Adapter and Accessories chapters to cover new features and gear.
- Replace some of the photos to include shots from the A7S and A7II in the mix.

The A7 Series camera features include:

- Exmor CMOS full frame sensor (with different megapixels depending on camera version)
- TruBlack XtraFine LCD screen (3"/ 7,5 cm) with 921.6K dots resolution with tilt functionality
- 1.3 cm (0.5inch) Electronic Viewfinder
- 1200-zone evaluative light metering
- Built-in Wi-Fi and NFC
- LED-auto focus illuminator
- Multi Interface Shoe
- 9 customizable buttons and 45 assignable functions

Key differentiating features among the cameras:

- A7: 24MP and fast hybrid-autofocus.
- A7R: 36MP version, with new, higher-density sensor design, but without optical low-pass filter of A7. Also does not include the faster hybrid auto-focus system in base model.
- A7S: High-sensitivity version with an effective ISO range from 100 to 409600 and with 4K video capability, but only 12MP.
- A7II: Uses the same sensor (with minor tweaks) as the original A7, but updates the external ergonomics and adds image stabilization as the world's first 5-axis sensor-shift image stabilization system for a full-frame ILC. The A7II has the same 50Mbit XAVC-S codec as the A7S but lacks 4K video.

Structure from Motion with Multi View Stereo provides hyperscale landform models using images acquired from standard compact cameras and a network of ground control points. The technique is not limited in temporal frequency and can provide point cloud data comparable in density and accuracy to those generated by terrestrial and airborne laser scanning at a fraction of the cost. It therefore offers exciting opportunities to characterise surface topography in unprecedented detail and, with multi-temporal data, to detect elevation, position and volumetric changes that are symptomatic of earth surface processes. This book firstly places Structure from Motion in the context of other digital surveying methods and details the Structure from Motion workflow including available software packages and assessments of uncertainty and accuracy. It then critically reviews current usage of Structure from Motion in the geosciences, provides a synthesis of recent validation studies and looks to the future by highlighting opportunities arising from developments in allied disciplines. This book will appeal to academics, students and industry professionals because it balances technical knowledge of the Structure from Motion workflow with practical guidelines for image acquisition, image processing and data quality assessment and includes case studies that have been contributed by experts from around the world.

Taking the Enlightenment and the feminist tradition to which it gave rise as its historical and philosophical coordinates, *Feminism and the Politics of Travel After the Enlightenment* explores the coincidence of feminist vindications and travel in the late eighteenth and nineteenth centuries, the way travel's utopian dimension and feminism's utopian ideals have intermittently fed off each other in productive ways. Travel's gender politics is analyzed in the works of J.-J. Rousseau, Mary Wollstonecraft, Stéphanie-Félicité de Genlis, Germaine de Staël, Frances Burney, Flora Tristan, Suzanne Voilquin, Gustave Flaubert, George Sand, Robyn Davidson, and Sara Wheeler.

[CLICK HERE](#) to download the first chapter from *Psychovertical*. *Psychovertical* is the story of what happens to a nice lower-class kid with dyslexia who gains control over his circumstances by clinging to giant stone faces, thousands of feet in the air, for days at a time. In this case, Kirkpatrick uses his 12-day solo climb of the Reticent Wall on California's El Capitan as the experience that helps him understand how growing up poor and struggling with dyslexia and low self-confidence set him on a path of extreme adventure. Kirkpatrick's writing is gripping and highly entertaining -- even non-climbers will enjoy his raw intensity, gallows humor, and honest, self-deprecating storytelling style. This book is a Boardman-Tasker Prize winner, which is recognition given for outstanding mountaineering literature. From the judges' remarks: "The book is very cleverly structured. The cuts from scene to scene and climb to climb work wonderfully well -- a sort of mountaineering Day of The Jackal -- as Kirkpatrick comes closer and closer to his nemesis on Reticent Wall. And it is this climb, the running narrative of the book, that grips the most: 14 pitches of aid climbing, unrelieved by conversation with a partner other than

himself, should by rights be boring. But it grips the heart further and further.”
